

IKE Insight

Take the legwork out of NJUNS ticketing

Intelligent automation helps save time and avoid errors in ticket creation and delivery

IKE SPEEDS UP THE TICKETING PROCESS

Managing NJUNS tickets is time consuming and error prone

Manually creating, updating, and closing out joint-use notification tickets is time consuming and error prone. Pole owners and attachers are seeking ways to maximize speed, reduce human errors, and keep joint-use programs on track.

Fast, accurate ticket creation and delivery

Joint-Use Ticket Automation from IKE Insight helps electric utilities, communications companies, and engineering firms seamlessly create, populate, and update NJUNS tickets using their existing data.

Eliminate manual data entry

Replace manual inputs and human error with intelligent automation, reducing costs and time to completion.

Structure and normalize data

We apply our natural language and pole-specific AI capabilities to existing data sets and automatically populate NJUNS ticket fields.

Tackle common ticketing bottlenecks

IKE's automated process helps alleviate ticketing backlogs, such as violation reports from safety audits or requests for fiber broadband build-outs.

Improve collaboration between pole owners and attachers

We help enable efficient communication and work coordination on all types of joint-use programs, including maintenance, relocation, new construction, safety, and compliance projects.

IKE IS TRUSTED BY

5 of the 10

largest communications
companies in the U.S.

IKE IS TRUSTED BY

8 of the 10

largest investor-owned electric
utilities in North America

Keep your projects on track with intelligent automation

Violation reporting

Address common issues that arise during inspections and audits, such as NESC infractions and double wood.

Make-ready construction

Prep poles for new attachments while maintaining safety and compliance with standards.

Pole transfers

Transfer attachments from an existing pole to a newly installed one.
