Major U.S. infrastructure group standardizes on the IKE platform

ikeGPS (IKE) today announced that one of the largest communications infrastructure companies in the United States has standardized on the IKE platform for all pole-related 5G and fiber deployment processes.

Relating to the announcement, IKE CEO Glenn Milnes, commented.

- + We are pleased to be working with this tier-1 infrastructure group. Our objective is to get them to market faster, be it fiber or 5G construction. For this particular customer, the IKE platform has proven to more than double their pre-construction speeds for network deployments.
- + The expected revenue impact is not yet defined however we believe this will have a positive impact on our financial performance FY21 and beyond, and on our broader position in the North American market.

ENDS

IKE seeks to be the standard for collecting, analysing and managing pole and overhead asset information for electric utilities, communications companies, and their engineering service providers.
